

Gateway TelNet Educates Customers on Mobile VoIP Technology

*Small to Mid-Sized Companies to Benefit
from Latest Advancements in Mobile
Communications Technology*

VAN NUYS, CA — February 28, 2011 — Gateway TelNet, an industry leader in Unified Communications, announced today that recent statistics by the industry's leading research firms are showing that mobile Voice over Internet Protocol (VoIP) is poised to revolutionize the communications industry. This technological advancement is increasing profitability and providing substantial benefits to small to medium sized businesses (SMB) across the globe.

Juniper Research, who specializes in appraising high growth opportunities for the mobile markets, "expects the total number of mobile VoIP users to exceed 100 million by 2012." Paired with InStat's prediction of "288 million mobile VoIP users by 2013" it's easy to see that mobile VoIP is making its way to the forefront of communications. Jerry Hilecher, President of Gateway TelNet states, "As our customer's trusted technology advisor, we feel obligated to educate our customers about the business benefits of mobile VoIP and how it can

enhance the way they communicate. It's up to us to understand where the communications industry is headed, but more importantly it's absolutely vital that we find the technologies that make our customers more *profitable.*"

Traditional VoIP has been around since the 90s, but until recently the Internet has not been able to adequately support VoIP. Past developments have stabilized VoIP's performance and this explains the dramatic increase in demand for the technology, especially among SMBs. VoIP's primary appeal lies in its sizable cost savings for end users and in a struggling economy, VoIP was the blatantly obvious choice for most business owners. However, for the past several years SMBs were limited to only using VoIP at the office and at home, which deterred a large section of the population from deriving the technology's benefits. Mobile VoIP "cuts the cord" and allows users to enjoy all of the benefits of VoIP technology *from their cell phone.* Mobile VoIP enhances integrations with applications such as Presence Management, Find Me Follow Me and Unified Messaging.

As smart phones, like Apple's iPhone and Motorola's Droid, continue to grow in popularity, so does the market for mobile VoIP. SMB's are being educated on the value of mobile VoIP and as a result, demand for this technology is accelerating.

ABOUT GATEWAY TELNET

Gateway Telnet Inc. is Southern California's leader in introducing communications technology to the business environment. Even in a difficult economy, Gateway Telnet has found Return on Investment opportunities to allow businesses to increase technology and increase their competitive advantage in the marketplace all at a cash neutral position.

Partnering with TAG National and its 110 affiliates, Gateway Telnet has the unique capability of installing and servicing a variety of cutting edge communications technologies anywhere in the United States while maintaining the finest service program in the marketplace.
