

Gateway TelNet Helps Businesses Find Answer for COVID-19 in Workspaces

Leading Managed Technology Services Provider Protects Mid-Sized Cosmetics Company With Facial Recognition and Thermal Imaging Cameras

VAN NUYS, CA – September 2020 — Gateway TelNet, a leading managed technology services provider (MTSP), announced today, that they successfully deployed a robust technology solution within Jocott Cosmetics to assist them with the employee and guest safety challenges presented by COVID-19. The pandemic has completely shifted the way businesses operate and many business owners have been looking for safe, responsible ways to reopen so they can continue their operations without endangering their employees or guests. Gateway TelNet is using thermal cameras with facial recognition software to help small to mid-sized businesses (SMBs) in enforcing stricter health policies at work, to keep everyone well protected from COVID-19.

Thermal cameras have exploded in popularity among SMBs due to their capacity to prevent illness from ever reaching a workspace. For example, when an employee or guest walks up to the front door, the thermal imaging technology scans the individual to see if they are showing any signs of sickness. If they are sick, it sounds an alarm and prevents entry. If not, the individual is permitted access as usual. This eliminates the need for many companies to put their receptionists at risk, via the use of a handheld thermal scanner. These

solutions can also be configured to only permit entry if someone is wearing a mask, properly. Businesses can only thrive when employees and guests feel safe. That is the foremost responsibility of any business owner and Jerry Hilecher, President of Gateway TelNet comments, “Facial recognition and thermal imaging cameras offer the certainty required for employees and guests to feel safe in your workspace. Once everyone knows they’re not at risk, they can perform their duties, effectively.” He later added, “It’s also worth noting that deploying this type of protective system demonstrates a significant effort to protect everyone from the virus, which would likely reduce liability concerns in the case of an incident.”

Gateway TelNet is a provider of enterprise-grade provider of enterprise-grade provider of business phones, managed IT, surveillance, internet and VoIP systems for elite organizations. For more information please visit <http://www.gatewaytelnet.com> or call 818-779-3200.
